

Every Minute Counts

It can take nearly 18 months before a drug diversion incident is discovered — too late to protect patients or recoup cost from lost doses. What if you could identify them in minutes?

ANiGENT has changed the paradigm on drug diversion prevention. ANiGENT is the only software provider that offers MAAP (Medication Administration & Analysis Program) Analytics, the next evolution.

Designed and built from the clinical ground up, MAAP Analytics tracks and monitors **all users, all medications, in all locations**, accelerating the ability to identify risks at the click of a button.

The Innovation Behind MAAP Analytics®

Built to incorporate health system data flow

- Collects all data from any ADC and EHR systems
- Integrates waste reconciliation and assay testing results — the only platform with this capability in the market
- Utilizes Microsoft Azure and Power BI cloud based technologies to comply with all HIPAA and PHI requirements and certifications

Proven to reduce practice noise and lost revenue*

- Uncovers all discrepancies that could lead to lost revenues
- Segments errors by users, medications, and locations
- Tracks and monitors resolutions

Designed to leverage knowledge from continuous learning

- Alerts probable risks in minutes
- Detects potential drug diversions incidents
- Identifies practice improvements

Intended to support business intelligence (BI)

- Improves patient outcomes
- Optimizes claims processes
- Strengthens operational efficiencies
- Predicts future behavior and risks
- Identifies a course of action

Capable of tracking and capturing specific behavior

- Utilizes proprietary algorithms to capture potential risky behaviors of specific admins.
- Delivers real-time scoring by job functions, shifts, medications and locations for the most accurate comparative analytics

All users
All medications
All locations

Only platform to
incorporate waste
assay testing results

Proven to reduce
error rates and
recoup costs

A critical
component of
any BI strategy

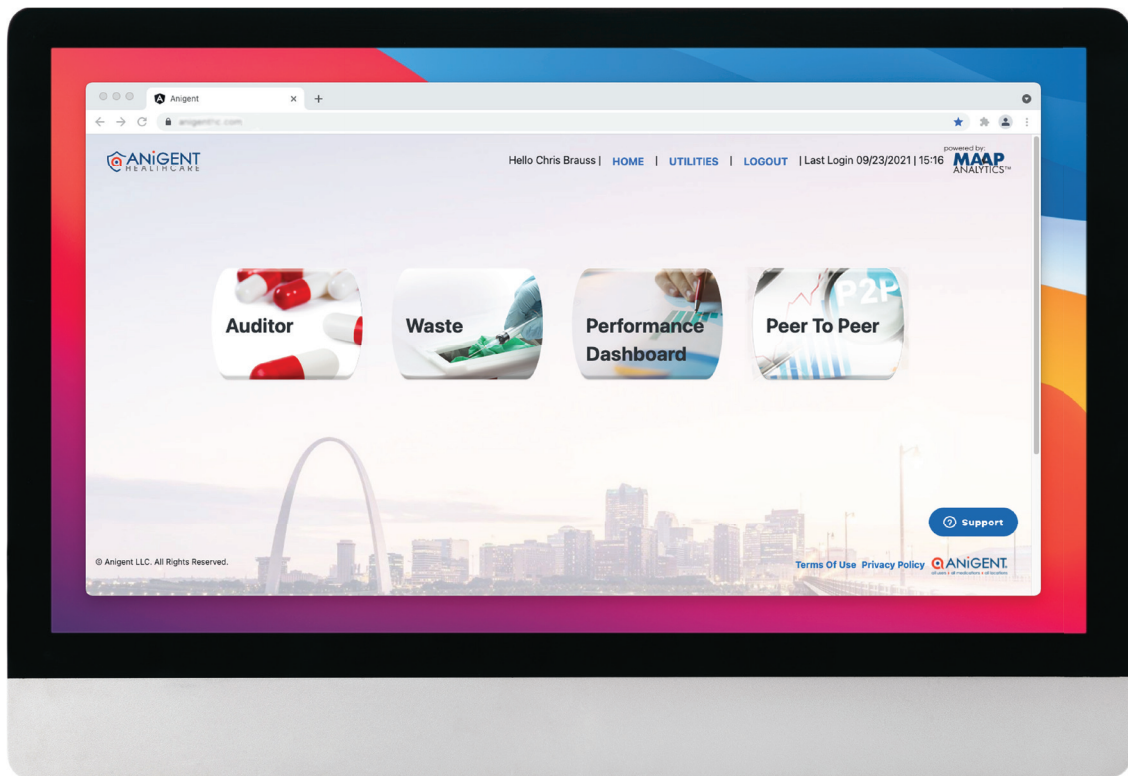

* Benchmark study from 2013-2019 identified from over 2.2M transactions a reduction of variances from more than 20% to less than 1% and significantly reducing revenue loss during same period.

MAAP Analytics[®]

What “Different” Looks Like

MAAP Analytics collects, analyzes, and harmonizes data from disparate systems, producing real-time results that pinpoint trends and high-risk events. Our propriety process is unmatched by any other product.

MAAP Analytics is the only drug diversion prevention platform capable of identifying **all users, all medications, in all locations.**

Single hospital, multi-facility and enterprise wide programs available including attractive financing options.
